

Shri S. K. Garg,
CMD

throughout the nation and simultaneously meeting the energy demand with improved power generation capabilities.

Before we go on to discuss how NHPC is transforming the landscape of hydro power generation in the country, let's have a quick glance at the commendable feats achieved by the organisation so far:

NHPC is -

- ◆ The largest organisation for hydro power development in India.
- ◆ A schedule 'A' Enterprise of the Government of India.
- ◆ Accredited with ISO-9001 and ISO-14001 certificates for its quality system and concern for the environment.
- ◆ Awarded the prestigious 'SCOPE Meritorious Award for Corporate-Social Responsibility and Responsiveness' for the year 2005-06.
- ◆ Among the top 10 companies in the country in terms of investment.
- ◆ Given a credit rating of 'AAA' for domestic and foreign borrowings.
- ◆ Registered as a 'consultant' with World Bank and Asian Development Bank.

NHPC, the pioneer in hydro power development, has successfully established many power plants across the country. And with a dozen more in its execution stage, this public sector enterprise is well on its way to provide sustainable hydro power to the nation, years to come.

Exploiting the enormous reservoir of hydro power and providing hydro electricity to the entire nation, before long, is a promise made by the National Hydroelectric Power Corporation Limited (NHPC) to India - a vow that this thriving public sector enterprise is quite resolute to live up to.

As indicated by the assessment made by the Central Electricity Authority, India has a utilisable hydro power potential to the tune of 1,48,700 MW of installed capacity. To harness this energy source, NHPC has taken a lead in giving a thrust to the development of hydro power in India. The organisation is establishing a number of hydro power plants

Redefining Success

Established in 1975, NHPC has steadily grown to become a premier organisation in the field of hydro power development in India today. The corporation has the capability to undertake all activities from conceptualising to commissioning of all types of hydro electric power projects. It has acquired sufficient expertise and state-of-the-art technology for planning, designing and executing both large and small size hydro power projects.

It is NHPC's incredible strength of highly qualified and experienced professionals in design and engineering that makes it a multi-disciplinary organisation. It has successfully carved a niche for itself in the field of hydro power development not only in India but among the neighbouring countries as well.

Have a quick look at some of the areas of excellence for which NHPC is well known, across the globe:

Construction management of hydroelectric projects: NHPC has a unique place in operation and maintenance, renovation and modernisation of hydro electric projects/power stations with its world-class expertise.

Design and construction of dams and underground works: Apart from setting up the power stations, NHPC is also heading works pertaining to construction of dams, barrages and underground works like tunnels, surge shafts, pressure shafts and caverns for power house.

Engineering geology and geotechnical investigations. NHPC uses modern technology and instruments that it utilises for site investigations and interpretation of bed rock condition. It has the full capability to undertake comprehensive geotechnical investigations for preparation of bankable Detailed Project Report (DPR) during the construction and post construction stage of hydro electric projects.

Contract management: NHPC provides to its client the technical and commercial advisory for procurement of new contracts. Major international associates such as Alstom Power Hydro (France) and Mitsui and Company Limited (Japan) are few of its clients.

Boosting Power

With renewed thrust on hydro power, power generation from NHPC power stations is steadily increasing every year. During 2006-07, NHPC power
