Total		7750 MW

Project Kiran

NHPC is currently in the process of implementing 'Project Kiran' - an Enterprise Resource Planning (ERP) initiative, to ensure optimum utilisation of generating assets and accelerate the development of construction projects. Once fully implemented, the project is likely to improve quality, productivity and profitability of the organisation. NHPC is also in the process of setting up a Tier-III level enterprise class data centre at Faridabad for hosting the ERP system.

Nurturing talent

NHPC knows that it is the employees of an organisation that are behind the success of any organisation. For this reason, NHPC is always exploring new ways to upgrade the skills of its human resource. Training programmes, seminars and workshops on managerial and technical skills improvement, are regular features in all Human Resource Development (HRD) initiatives. A large number of training programmes are conducted in-house. Employees are also sent to attend various workshops all across India and abroad.

This practice has helped the corporation to fully realise the potential of its about 12,500 employees and possess the largest skilled manpower in the country as far as hydro power sector is concerned.

Placing society above all

NHPC is not only emerging as a profit making unit but as a responsible corporate as well. With a strong committed policy towards Corporate-Social-Responsibility (CSR), NHPC is constantly working towards improving the quality of people's lives in the vicinity it operates. Apart from carrying out the environmental preservation initiatives, it has launched various programmes pertaining to adult education and vocational training, especially in rural areas. In addition, the organisation also tries to connect people with the growth process through the construction of roads, bridges and dams.

Empowering Rural Areas

Keeping in view its responsibility as a public sector unit, NHPC is engaged in many developmental projects. Currently, it's implementing the Rajiv Gandhi Gramin Vidyutikaran Yojana (RGGVY), an initiative for rural electrification. This includes electrification of rural areas of 27 districts in five states - Bengal, Bihar, Jammu and Kashmir, Chhattisgarh and Orissa. It is committed to provide power to 29,360 villages under RGGVY.

This is not all! The corporation is also carrying out construction and maintenance work of roads in rural areas of Bihar under the Pradhan Mantri Gram Sadak Yojana (PMGSY).

Shaping Business Strategies and Growth

Thirty three years of successful operation and its ever increasing expertise have led NHPC to take up the 'Study for Business Process Re-engineering and Restructuring' exercise. NHPC has structured the whole exercise in a manner which promotes the best practices followed in the industry. Throughout the exercise, impetus is given on providing a systematic and participative process, and improving the human resource capabilities and work culture so that participating organisations can structure an ideal business. With such a tremendous growth record, NHPC is indubitably en route for hydro powering the entire nation soon.
