

During FY 2006-07, POWERGRID achieved a turnover of about Rs. 4,082 Crore and Net Profit of Rs. 1,229 Crore. Gross Asset base of the Company has grown to about Rs. 29,015 Crore in FY 2006-07.

POWERGRID is the first power utility in India to be certified with Integrated Management System comprising ISO: 9001 for Quality Management, ISO:14001 for Environment Management and ISO:18001 for Occupational Health & Safety. During the year 2006-07, POWERGRID achieved the distinction of being the first power utility & second company in the world to get certified with PAS 99:2006 integrating the requirements of ISO 9001:2000, ISO 14001:2004 and OHSAS 18001:1999. In recognition of POWERGRID's initiatives for social accountability, the Corporation has been certified with SA 8000:2001

For optimum utilization of available natural resources in the country, National Grid is being developed by POWERGRID in a phased manner integrating five electrical regions, matching with generation capacity addition and growth in power demand. Presently, National Grid with an inter-regional power transmission capacity of about 17,000 MW has been established, which is envisaged to be enhanced to over 37,000 MW by 2012. Four major power regions of the country namely, North-Eastern, Eastern, Western and Northern are now operating as one synchronous grid with total generating capacity of over 97,000 MW, one of the largest grids in the world. This is facilitating free flow of power from surplus to deficit regions bringing much needed economy. POWERGRID is actively associated with the international forum of Very Large Power Grid Operators to meet 21st century technological developments in Electricity Grid.

Modernization of Regional Load Dispatch Centres, establishment of State/Sub-State Load Dispatch Centres and dedicated communication facilities, by POWERGRID, along with implementation of Availability Based Tariff in all regions have helped in improving grid stability, system

“

*A very successful company with emerging International Best Practice in Transmission. The World Bank is proud to be associated with POWERGRID*

availability and economy of operation. As a result of this, there have been no grid disturbance in any part of India during last five years. Further POWERGRID has taken initiatives to build intelligence in to the real time Grid operation i.e., Intelligent Grid, in the next 5 to 6 years to manage very complex and large Grids.

POWERGRID continues to give major thrust to Research & Development activities and seamless integration of new technologies. R&D efforts have led to implementation of transmission towers with reduced right-of-way requirement, use of high temperature endurance conductor, remote controlled substations, application of FACTS, compact substation layout, design and implementation of 765 kV AC system and  $\pm 800$  kV, 6000 MW HVDC systems. 1200 kV test substation along with test transmission line has been taken up by the corporation in Madhya Pradesh for field trial of 1200 kV equipments.

Multilateral funding agencies have appreciated the pivotal role being played by POWERGRID in Indian Power Sector, especially its efforts in conservation of Right of Way, well defined policy & procedures, technology initiatives, impeccable performance in Grid Management etc. Appreciating the excellent performance of POWERGRID and the role being played as Consultant nationally and
