

internationally, the World Bank has assured its support to POWERGRID in pursuing this endeavor on a larger scale.

POWERGRID is playing a strategic role in the growth of Indian Power Sector. Over a decade of excellent business operations, POWERGRID has developed strong expertise in various facets of power transmission business and is offering consultancy services to various power utilities in India and abroad. It is geared up to become a global transmission entity by seizing business opportunities available in international markets. The corporation has already established footprints in countries such as Nepal, Bhutan, Afghanistan, Dubai etc.

POWERGRID has been successful in facilitating private investment in transmission sector. The first public-private Joint Venture (JV) project at JV cost of about Rs.1600 Crore was completed successfully. POWERGRID has established four more JVs with private power producers and many more are in the pipeline.

It has been a continuous endeavour of the company to deal effectively with environmental and social issues relating to its projects. Emphasising upon its commitment towards the same, POWERGRID is religiously following its unique Environmental and Social Policy & Procedures (ESPP), evolved in consultation with a wide section of people to take ample care of environmental and social issues arising

out of its activities, in every project. The provisions of ESPP have been upgraded and modified through a committee constituted of eminent persons and experts in this field, in line with changes in Laws/ guidelines/rules to make it up to date and matching with best international practices. In recognition of its unique approach and contribution towards environment & social management of issues in implementation of transmission projects through well defined Environmental and Social Policy & Procedures (ESPP), The World Bank has honoured POWERGRID with "The Green Award, 2006".

To meet future demand, Government of India has envisaged a generation capacity addition of about 78,000 MW during XI Plan period (FY 2007-12). POWERGRID, being the CTU has responsibility to develop requisite transmission system under Central Sector matching with generation projects, for which an investment of more than Rs.55,000 Crore is planned during this period.

Recently, Powergrid entered the capital market with an IPO of 573.9 million equity shares. The issue closed with responses from both domestic and global investors that surpassed the most optimistic expectations. Overall the issue was oversubscribed by 64 times. This tremendous response shows the growth potential of the Corporation and the faith of people/ investors in Indian Power Sector in general and Corporation in particular.
