

Providing high quality free treatment for all ailments from simple dental problems to complex craniofacial and tumour surgery is truly the reason for its success. This is made possible due to the 100 bedded onsite general hospital and its committed staff.

Exposure to the clinics during preclinical years develops the ability to reason, and the University also provided us opportunities to actively participate in national conferences, according to Neeraja, Alumni of the Institution.

Encouragement of academic excellence is the focus of the mission of this institution. Numerous scholarships, sponsored externship programmes are given to outstanding students to fulfill this mission. Two outstanding dental graduates are sent to United Kingdom for 6-8 weeks of training every year, during their internship. This year two students visited National Dental Centre, Singapore for 4 weeks.

Under the umbrella of the University, there are other institutions as well. These include the College of Allied Health Sciences, the College of Nursing, the College of Physiotherapy and the College of Engineering. The College of Allied Health Sciences, a four-storied Basic Medical Sciences block houses the department of Anatomy, Physiology, Bio-Chemistry, Pathology, Pharmacology and Microbiology.

The College of Nursing & Physiotherapy

The College of Nursing imparts quality education on par with global standards, using updated systems and maintaining continual improvement. The bagging of gold medals by its students at University exams stands testimony to its high standard of training. In 2007, two students topped the university exams.

The College of Physiotherapy was established in 1993 and has been known for setting standards for Physiotherapy education in India. It utilizes innovative programmes such as introduction of physical diagnosis and clinical reasoning in both undergraduate and postgraduate programmes. It has tie-ups with the major health institutions in the country. The College organizes the very popular Hands on workshop on taping techniques Concoct. This institution is currently involved in developing a low cost artificial upper limb.

Research & Publication

Research has always been on the forefront of all academic activities at Saveetha. The fact that 323 scientific papers have been presented by the staff and students in national and international conferences and that over 100 research papers have been published in the national and international indexed journals stands testimony to this.

Bio-Medical Research Unit and Lab Animal Centre (BRULAC) is another initiative to foster research. The Animal House cares for and uses lab animals for research. The facility which is around 10,000 sq.ft. has the ground floor for large laboratory animals and first floor for small lab animals. It also holds a spacious conference hall with two distinct laboratories for the use of the research personnel. The facilities available with the lab animal centre needless to mention are on par with international standards.

Some of the pathbreaking ongoing research in progress include Development of Temporomandibular Joint Prosthesis in collaboration with the NIFTDC Hyderabad a concept which is first of its kind in the world, being developed using sheep as an experimental model and the Oral Cancer Research project, an Epidemiological study of Oral Cancer Research Project is in progress to screen 1 Lakh patients. Infact the university is also the site for many international research studies. An MOU has been signed between Bioscaffold International of Singapore and Saveetha University to establish joint biomedical research on Bone regeneration and Dental Implantology through clinical trials.

I'm proud and honored that I am part of the Saveetha family now, says Kitty Thomas, a BDS student, voicing the sentiments of all those pursuing their education within the portals of Saveetha University.
