

AN IMPACT FEATURE

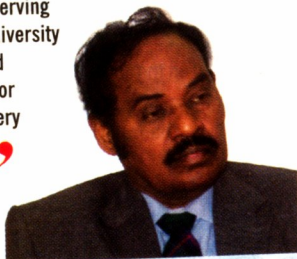

and the Modi Nagar campus (New Delhi) is where the SRM Institute of Management and Technology is situated.

The size is just one aspect that sets this dream university apart from its peers! In fact, there are hardly any universities in the country today that offer the number and variety of under-graduate and post-graduate courses that the SRM University offers! For instance, consider the flagship education stream of the University, which is the Faculty of Engineering and Technology. An unthinkable line-up of over 20 B.Tech and nearly 23 M.Tech courses covering a wide spectrum of engineering disciplines such as Civil, Mechanical, Mechatronics, Aerospace,

“ This university, which has spent decades in educating and enabling the holistic development of students, has advocated a unique “Semester Abroad” programme. 100 deserving students from the university are sent to renowned institutions abroad for one semester, at a very reasonable cost ”

T.R. PACHAMUTHU
Chairman

The 'Smart Classroom' and 'Super Smart Classroom' concepts have revolutionized the learning experience, what with interactive boards and LCD projectors replacing the primitive black boards, and computers substituting good old books. The Faculty of Engineering and Technology alone has nearly 56 smart classrooms and 6 super smart classrooms to its credit. In addition, the hi-tech laboratories in the campus enable students to practically apply their bookish knowledge. The Computer Lab for instance, hosts exclusive operating system-specific segments such as the Sun Solaris lab, Linux lab, etc. Academic partnerships with Microsoft, Red Hat, and IBM have ensured that software updates are readily made available to the laboratory. The campus also boasts of a unique Active Learning Laboratory that encourages students to perform simple experiments to demonstrate and demystify complex theories. The Department of Genetic Engineering too has deployed best of breed instruments in its laboratories to facilitate effective gene analysis. Incidentally, the SRM University is the only place where even under-graduates are allowed to operate the very advanced Automatic DNA Sequencing machine in the Genetic Engineering lab to study gene behavior. To expand their knowledge base further, students can visit the library affiliated to their department, or the huge Central Library that offers thousands of books and over 2500 e-books/e-journals.

However, all-round development of a student is possible only if all these modern learning facilities are juxtaposed with opportunities to learn the ways of the world! To facilitate this, even under-graduate students are encouraged to undertake real-time projects with industry leaders with whom the university has forged tie-ups. Also, experts from companies such as Wipro, Infosys, etc., are invited to the university campus to share their experiences with the students. Every department also occasionally holds national / international-level conferences in the huge in-campus auditorium with a seating capacity of 4500.
