

Suhitha, who has received the opportunity to visit a foreign university under the "Semester Abroad" programme, says, "I am so happy that I have won the opportunity to do my 6th semester at the enviable MIT. I am thankful to the university for giving me this chance and also for extending financial support to me for making my dream come true."

Everything said, no matter how happy the students are within an educational institution, the success quotient of the institution is determined only by how happy its students are after they graduate. The Placement Cell of the SRM University makes sure that its students find high-paying jobs with industry giants, even before they step out of college. During the current year, over 1450 students have been placed by the cell with an initial pay packet of Rs. 3 - 4.5 lakhs per annum. The most common employers

are leading IT companies such as CTS, TCS, Infosys, Wipro, HCL, (which took a record number of 746 students in a single day), etc., and manufacturing giants such as Mahindra & Mahindra, ESSAR, L & T, Ford Motors, etc. Besides helping students find jobs, the Placement Cell offers career guidance to students, and even helps them prepare for campus interviews. The cell also lends students a hand in identifying and overcoming their

shortcomings prior to the interviews. Also, an in-campus IT Park is under construction, which when completed will make sure that lucrative jobs knock at the doors of the students, much before they go hunting for one!

In addition to safeguarding the interests of the student community and ensuring their bright future, it is also the duty of a university to spearhead all efforts that can effect positive changes in society. The SRM University, which firmly believes that service to man is service to god, is already engaged in some path-breaking research that can enhance the quality of human life. Within a short span of one year, the Nano Technology Research Centre within the SRM University campus, has acquired a government grant of Rs. 1.2 crores to develop Nano filters for water purification and removal of volatile organic compounds from contaminated air. The results of this research could provide a permanent and more effective solution to the city's perennial water problems! The centre has also published a paper in an international journal on the development of silver nano particles that have an anti-bacterial and anti-fungal effect on contaminated water. In addendum, the centre has also applied for a patent for the usage of Nano technology to determine the health of the

Vinitha, from the same department, who has also received the opportunity to do her 6th semester at MIT, says, "My hardwork has paid off! The 94.8% score that I took in my department helped me win the opportunity to study at any of the top-5 American universities. I chose MIT, which tops the list. Since I was selected by the university, I had no visa hassles. It is up to me now to capitalize on this dream opportunity, and do all the spadework essential for doing my Masters at the same university."

“ 100% placement is possible by SRM, because, even during the first year of the under-graduate programme, integrated training in communication skills, and personalized career counselling is provided to students. From the second year onwards, the university itself offers students courses in Personality Development, besides imparting intensive training to them to efficiently handle the aptitude tests and quantitative analysis. These soft skills imparted throughout the course ensure 100 % placement for the SRM graduates ”

human kidney, both qualitatively and quantitatively, using quantum dots. Once patented, such a technology can make a world of difference to the diagnosis and treatment of kidney-related ailments. Moreover, funded by the

University itself, the Department of Genetic Engineering is undertaking extensive research to diagnose Duchenne/Becker Muscular Distrophy at the gene-level, so that this deadly disease can be prevented. The department is also involved in critical research that can reveal disease-causing genetic anomalies, the identification of which can greatly aid drug development.

Vamsi Krishna, who is doing his MBA, says, "Just when I was looking for a company to do a project with after my third semester, my professor had me stumped by asking me if I would like to study abroad. Common now... who in the right mind would miss out on this opportunity? My emphatic 'Yes', fetched me the opportunity to study at the University of Wisconsin. Now, I will be doing my final-year project overseas! I consider myself blessed to have joined the SRM University, without which this would not have been possible!"

The SRM University thus opens a brand new vista for gen-next, studded with rich, international learning experiences, academic accomplishments, opportunities for self-growth, and all-round success. So, parents, if you want your child to grow up to be a well-rounded individual, then join hands with the SRM University, and help design their future!
