

# India Warming...

**LIFE ON THE EDGE** - Climate change and rising sea levels affecting coastal lives.

**RIVER YATRA** - Problems affecting India's rivers.

CNN-IBN takes you through 6 hot spots across India under threat.

**TROUBLED FORESTS** - The Western Ghats - largest tract of contiguous forest under threat.

**MUMBAI FLOODED** - Why the mangrove forests of Mumbai are a thing of the past?

**LAND OF THE DAMNED!** - Wildlife on the edge in the northeast.

**COLD DESERT ON THE BRINK** - Global warming affecting residents of Ladakh.

Forests in the north-east getting depleted because of our growing energy needs, widespread contamination affecting India's rivers, climate change and rising sea levels upsetting people's lives, rapid urbanization and global warming affecting Mumbai, Indian cold desert in Ladakh melting at an alarming rate, Western Ghats - India's largest region of forest facing high risk because of uncontrolled mining - the ecological balance is in trouble across the country and how.

'Citizens For Earth', a 6-episode special on CNN-IBN explores critical environment-related issues like climate change, urbanization and deforestation and its effects. A CNN-IBN initiative that highlights each of these six hot spots. Stay glued.
