

The service centre/ workshops have recently been upgraded with latest available diagnostic test equipments/ tools like injector Tester, wheel alignment etc., The Technicians/Supervisors are regularly given in-house training & also regularly sent to M.U.L for specialized training/refresher courses to keep them updated with the latest developments. Air-conditioned customer lounge with T.V & Reading Material, Tea & Snacks. Motto of the company is quick, cost effective and high quality services. SAYA has a history of getting awards from Maruti for its good services. E-mail : saya@ndb.vsnl.net.in, saya@airtelbroadband.in & sayaautomobilesltd@yahoo.com

■ **UNI-TOP POWER ELECTRONICS PVT. LTD** — Is the name synonymous to Power Electronics and other Industrial grade electrical/electronic products. The company started its operation in 1998 under the brand of 'UNITOP'. Today, UNITOP provides power solution to many telecom, power establishments, Industrial Houses and end users. As per the need and requirement of the customer the company manufactures and designs the Servo Voltage Stabilizer. All the products confirm to IS specifications/quality control. The company has various service centres at different locations across the country for timely service to the end user. On the basis of vast experience and strong after sales service, has been appointed as the channel partner of the international brand in UPS i.e. APC-a brand to reckon with the UPS industry. Their experts are always ready to provide technical support whenever needed. UNITOP has been able to provide a unique level of service, support and added value to end customers. Some of their valued customers are – Indian Oil Corporation, Idea Cellular Ltd, Barista Coffee Company Ltd., Naukri.com, HMV, Jawahar Lal Nehru University, National Institute of Immunology, ICGEB, Mehraisons, Ericsson, Essar, Escotel, Hero Cycles and many more to add.

■ MOBILE PHONES MAY HARM YOUR KIDS!

Amidst a worldwide debate among the scientific community over the health hazards posed by prolonged use of cellular phones, The Indian Department of Telecom is examining a proposal to discourage the use of mobile phones by children under the age of 16 years. An expert's team at the Telecom Engineering Centre (TEC), a part of the DoT, has come up with draft guidelines suggesting that in order to minimise health risk through radiation children

below 16 years should not be allowed to use cellular phones. "The tissues of children are tender and therefore, they are likely to be more affected by use of mobile phones. Children below 16 years age should be discouraged from using mobile phones," the draft guidelines said while pointing to the fact that the World Health Organisation (WHO) too was studying if there were harmful effects of electromagnetic fields. The cumulative effect of electromagnetic fields may cause undesired effects on human beings, it further said. Back In 1999, as a result of public concerns about possible health hazards from mobile phone technology, the UK Government formed the Independent Expert Group on Mobile Phones (IEGMP) to examine possible effects of mobile phones and transmitter base stations. This group was headed by Sir William Stewart, the famous British biochemist and president of the British Association for the Advancement of Science. What made the Stewart Inquiry unique, was that it was made up almost entirely of biomedical specialists — and so were able to focus many man-years of acquired specialist knowledge on the problem. Their report, Mobile Phones and Health, was released in April 2005. In regards to the use of mobile phones by children the IEGMP stated: In Britain, the Chairman of the National Radiological Protection Board advised that parents should not give mobile phones to children age eight or younger as a precaution against the potential harm of radiation from the devices. The problem is, pretty much everything electric or electronic in the house produces electromagnetic radiation: mobile phones, remote controls, microwave ovens, hair dryers, television sets, even karaoke machines. The theory is that electromagnetic fields change the way molecules or impulses move along the nerve, and they may change the growth patterns or may change the genes that may cause cancer. It's believed children are more susceptible, in part because of their body size. Dr. Mark Atlas, a pediatric oncologist at Schneider Children's Hospital, New York, says, "One of the reasons that the concern is in children is that they will be exposed to this for many, many more years. Adults who start using a cell phone at age 40 or 50 will be exposed for 30 or 40 years a child who is exposed now is going to be exposed at a younger age for a lifetime." Obviously you can't limit your child's exposure to the refrigerator or to an oven, but maybe you can cut back on the number of cell phone calls your child makes. "The most compelling data is that perhaps 3 percent of childhood leukemias may be associated with high levels of electromagnetic fields, but that is not a lot. Its not compelling data to really change the way we live our lives. The risk is small, but the disease is important. The disease is a dangerous disease, and if there are measures to be done to prevent it, even though the risk is small, those are worthwhile doing," says Dr. Atlas.

So the parents should think twice before giving in to a child's demands for a cell phone. Researchers have speculated for more than ten years that the electromagnetic radiation emitted from cell phones may damage DNA and cause benign brain tumours, said Henry Lai, a bioengineering professor at the University of Washington.

■ SUNBOND ALUMINIUM COMPOSITE

Panel is a revolutionary and versatile new decorative building material widely used in interior and exteriors of buildings as curtain wall, wall paneling and wall cladding applications. **Sturdy Industries Ltd.- An ISO 9001-2000 certified company of Chemiplast Group** experienced and specialized in manufacturing plastic, aluminium products and building materials for three decades have adopted the best new generation THREE ROLLER TECHNOLOGY to manufacture **SUNBOND** aluminium composite panel of excellent quality, durability and stability. It is manufactured first time in India in thickness of 1mm to 6mm and in width of 900mm to 1600mm. The three roller high technique provides excellent flatness, uniform thickness, smooth surface and high bonding strength. **Sunbond Aluminium Composite Panel** is available in wide range or attractive and aesthetic standard Ral colors, and special patterns in wood, marble, granite, mirror & brush-finish both in high gloss and matte. They are easily folded, curved, shaped, punched, drilled using conventional tools and equipments of wood and metal fabrications and this enables the architects and designers more flexible in their creative applications. The company use best raw materials and manufacture excellent products meeting highest quality standards.

■ **Atelier** — The superspecialty cosmetic plastic & laser clinic is the venture of Dr. Madhurima Sharma, a professionally qualified cosmetic plastic & laser surgeon with rich experience in the field in India & abroad. Equipped with state of the art most effective & versatile multiple lasers, Atelier offers complete range of laser, non-surgical & surgical treatments under one roof. At Atelier, all procedures are performed by a qualified doctor trained in the relevant stream & all consultations are strictly confidential as we respect your privacy. Atelier, D-57, Hauz Khas, New Delhi – 110016. Ph.: 46071101, 1102, 9873172631
