

An Energy Efficient solution with Demand Response capabilities that enables an Intelligent Grid

Central Nervous System ... dual band GPRS Antenna communicates and ensures failsafe transmission of critical information between data centre and remote bases.

Nerve Center ... the ZigBee Antenna transmits and receives two way data communication from gaiaeco and gaiacell units – the essential building blocks for an intelligent system.

Alternate Nervous System ... high bandwidth Ethernet connectivity.

Senses ... transducers that respond and convert environmental stimuli to actionable data, creating higher levels of intelligence for energy management. 20 Ports that interface with temperature, pressure, lux, CO₂, etc. sensors.

System Health Indicator ... the LED Panel which indicates system health.

Muscles ... Digital Switching enables remote control of equipment.

Pulse ... comprising microprocessor based intelligent Class 0.5 TriVector Meters – Master Inlet Meter with Four Slave Outlet Meters that capture precise real time power consumption data.

The Brain ... a CPU built on a powerful open software platform working tirelessly on its schedules, processes, rules – 24x7.

Life Support ... Power Unit with battery backup supplies necessary energy across the unit. Short circuit and over current protection ensures the unit survives any surges.

Aorta with its Primary Arteries ... Inlet for the Mains and Outlet Connectors for Loads. Wind and weather-proof, can withstand freezing snowstorms or blistering sandstorms. IP67 and IP55 compliant.

Presenting www.connectgaia.com – Intelligent Electricity

Leveraging advanced metering, sensors, proven IP communication technologies and a robust IT backbone, [connectgaia.com](http://www.connectgaia.com) brings intelligence to energy management. With no software to install, [connectgaia.com](http://www.connectgaia.com) can be operated from an internet browser anywhere, just login to your secure account at any time and view concise charts that pinpoint energy consumption, trends and data from numerous sensors. Or, switch on or off electrical/electronic equipments from remote locations. [connectgaia.com](http://www.connectgaia.com) provides an effective and reliable foundation to monitor and control energy consumption remotely.

No software to install or maintain, just setup gaiaeco and gaiacell network in your premises, get connected and GO LIVE!

- An internet based Intelligent Metering application
- Created on IBM's integrated, open-standards-based Service Oriented Architecture (SOA)
- With TCP/IP based communication
- No need for maintaining Data Centers
- AMR Ready

MEASURE, VISUALIZE, ANALYZE, CONTROL AND SAVE™
REAL-TIME, ANYWHERE, ANYTIME – ACROSS THE ENTERPRISE
