

iPhone 3G

Revolutionary Mobile Phone

iPhone is a revolutionary mobile phone that allows you to make a call by simply tapping a name or number in your address book, favourites list, or call list. It automatically syncs all your contacts from a PC, Mac or Internet service. And Visual Voicemail lets you select and listen to messages in whatever order you want - just like email.

Great Widescreen iPod

iPhone is a widescreen iPod with touch controls that shows off your content - including music, videos, podcasts and audiobooks - on a beautiful 3.5-inch display. Sync content from the iTunes library on your Mac or PC. Scroll through songs and playlists with the touch of a finger. Even browse your album artwork using Cover Flow.

Internet in Your Pocket

iPhone uses fast 3G and Wi-Fi wireless connections to deliver rich HTML email, Maps with GPS and Safari - the most advanced web browser on a portable device. iPhone automatically syncs bookmarks from your PC or Mac and has Google and Yahoo! search built in. Since iPhone multitasks, you can even make a phone call while emailing a photo or surfing the web over a Wi-Fi or 3G connection.

Maps with GPS

Find your location, get directions and search for nearby businesses - all from your phone. Maps on iPhone 3G combines GPS, Wi-Fi and cell tower location technology to create the best map application on a mobile phone.

iPhone at Work

With support for Microsoft Exchange ActiveSync, iPhone delivers push email, calendar and contacts. And it uses enterprise - grade networking with Cisco IPsec VPN and WPA2 Enterprise support. So now the most revolutionary mobile device ever is also the ideal phone for business.

Available at select Airtel stores.
