

PROMOTING AN ENVIRONMENT OF DIVERSITY

The Petroleum Institute (PI) was founded in 2001 by Emiri Decree from H.H. Sheikh Khalifa Bin Zayed Al Nahyan, President of the UAE as an institution for engineering education and research in areas of significance to the oil and gas and the broader energy industries. The PI, under the guidance of H.E. Yousef Omeir Bin Youssef Chairman of the Governing Board, has realised that stated vision through planned development and expansion. The Institute's sponsors and affiliates include Abu Dhabi National Oil Company (ADNOC) and four major other international oil companies. The PI offers Bachelor degrees in Chemical, Electrical, Mechanical, Petroleum Engineering and Petroleum Geosciences, as well as Master of Engineering degrees in Chemical, Electrical, Mechanical and Petroleum Engineering. Strategic plans of the Institute call for establishment of the Ph.D. program in fall 2010. New engineering and science programs are planned in the future as needed.

In 2007, for the first time, the PI opened its doors to seek the best international students and is actively recruiting these students. PI invites applications from, and offers full or partial scholarship to students of the highest calibre.

"The Petroleum Institute offers full and partial scholarships to students of the highest calibre who meet the requirements governed by our academic scholarships policy. We promote an environment of diversity and encourage applications from qualified students from around the world to apply for these scholarships." — **Dr Michael Ohadi**, Provost and Interim President, the Petroleum Institute

The PI is dedicated to the education of the whole person as a life long learner and as an ethical industry professional and as such offers non-technical courses as part of its curriculum. There are initiatives in the study and development of alternative

energies and continues to develop research initiatives in this area.

The PI has affiliations with a number of international universities through student and faculty exchange and collaborative research in areas of common interest.

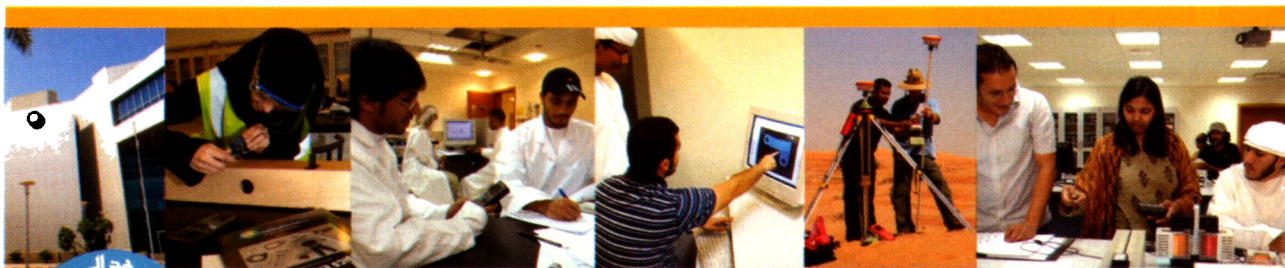

Currently there are over 1000 undergraduate students and around 50 graduate students enrolled in graduate courses at The Petroleum Institute. 140 students have graduated from the undergraduate programs in the last two years.

The value of any educational institution of worth is measured by the quality of its graduates as well as the research that it produces and our current students stand testament to the commitment of the PI to them and their preparation for professional life as evidenced by these quotes:

"One of the things I enjoy most is leaning by interacting with the other students and Petroleum Institute faculty who come from different cultures. The petroleum Institute provides a strong and purposeful educational environment in order to prepare students to confront a competitive world" — **Saeed Mohammed Al Sabousi**, Junior, Electrical Engineering Program

"What I like about the Petroleum Institute is the opportunity to get involved in many different extracurricular activities. I have learned a lot from these in terms of leadership, team work, and project management, for example. I enjoy the challenges that I face every day at the Petroleum Institute. These challenges arise while working hard to be good student, and from balancing that with social and extracurricular activities."

I particularly enjoyed the scientific visits that I have made with the Petroleum Institute to Japan, Austria and Germany." — **Mahmoud Adi**, Senior, Mechanical Engineering Program

The Petroleum Institute, Abu Dhabi offers students:

- * Study in the UAE
- * Opportunities of internship at partner universities & international travel
- * Medical benefits
- * Full and partial scholarships for students who meet the requirements
- * Accommodations for international students
- * Recreational activities

"We promote an environment of diversity and encourage applications from qualified students around the world for these scholarships."

- * Chemical Engineering
- * Electrical Engineering
- * Mechanical Engineering
- * Petroleum Engineering
- * Petroleum Geosciences
- * Material Science Engineering (under development)
