

Modern Science has proven that Dabur Chyawanprash WORKS. It has been...

...Clinically Proven to Increase Lung Capacity

Here's what happened to nine perfectly healthy volunteers aged between 60 and 70 years of age. Twice a day they were treated to Dabur Chyawanprash. Their breath-holding time and lung capacity were tested before, after and between monthly intervals and were found to improve post Dabur Chyawanprash intake. Also, it turned out that there was a significant improvement in their protein and nitrogen metabolism.

Based on 'Psychological, endocrine and metabolic studies on the effect of rasayana therapy in aged persons, By MD Verma, RH Singh, KN Udapa. Banaras Hindu University, 1972.

...Clinically Proven to Make Recovery Faster

That's what 30 pulmonary tuberculosis patients will make you believe. They were treated to Dabur Chyawanprash along with standard anti-tuberculosis treatment. Their rate of recovery matched an identical group who were treated to branded cortico-steroids and multi-vitamins. And that too, without any of the latter's side effects. Truly Dabur Chyawanprash makes recovery faster.

Based on 'Clinical study of Chyawanprash as an adjunct in the treatment of pulmonary tuberculosis'. By JK Ojha, MN Khanna, HS Bajpai, PV Sharma and TN Sharma, Bararas Hindu University, 1976.

To prove the point further, a group of patients suffering from head and neck cancer receiving radiotherapy were treated to Dabur Chyawanprash along with haematinics. Compared to another group receiving haematinics and vitamins, their severe skin reactions were the least and moderate reactions were found to be low.

Based on 'Effect of an Ayurvedic medicine (Chyawanprash) on early reactions during radiotherapy of head and neck cancer'. By GN Agarwal. King George's Medical College, Lucknow. Data on DRF files.

...Clinically Proven to Fight Depression

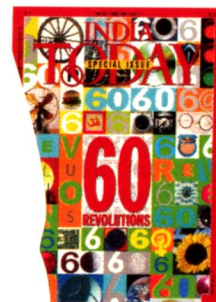

In a study, both the experiments and techniques were kept in dark about the identity of drugs to assess the adaptogenic properties of normal and depressive patients. Divided into two groups, they were treated to Dabur Chyawanprash or placebo. Those on Dabur Chyawanprash showed a higher reduction in complaints and alleviation of depressive symptoms.

Based on 'Double Blind Controlled Clinical Trial of Chyawanprash and Ashwagandha (W Somnifera): A Pilot Study'. By RH Singh and PB Behre, Banaras Hindi University, 1991.

...Clinically Proven to Improve Quality of Life

This was what was noticed in some smokers. Before they were treated to Dabur Chyawanprash, they were suffering from various afflictions ranging from cough, phlegm and breathlessness on exertion. After three months, 80% showed significant improvement in quality of life, a general sense of well-being, better digestion and better bowel movement.

'Effect of DRF 220196 (Chyawanprash) a polyherbal product on Smoking Related Manifestations' by Prof. O.P. Jaggi (Data on Files of DRF).
