

power plants for generation of renewable energy.

LEAF would achieve its goals through commissioning the most modern production facilities meeting global standards. It would follow all the norm and standards laid down by Government regulatory authorities in letter and spirit.

We at LAEF care for the
modernisation and efficiency.
Let the best plants
be commissioned.

Janak Raj Singh Uppal
Executive Director

The best and the most efficient

The company's facilities at its 100 acre complex are not only rated as the best by the world's leading equipment suppliers but also the most efficient in terms of energy conservation and cost of production. LEAF's paddy processing plant has 7 modules including three latest additions, equipments for which were sourced from the world's leading suppliers in Japan, Germany, Denmark, France and USA. The company also has special production facilities for rice for the diabetic and heart patients. The rice bran edible oil, a by-product obtained from rice bran is among the best edible oils in the world which has fat reducing qualities. The cattle feed comes from another by-product, de-oiled cake which is distributed by the company with ISI mark.

The focus areas

The company focused on non basmati space so that its volumes are large to give it large quantities of by-products. That has been the secret of faster growth and high margins of profitability. The company has served Indian masses through this strategy. The company expanded its plant at same location all these years because the surrounding fields produce the best paddy of India with yield of 3.2 MT per acre, highest in India. The location has the best infrastructure with rail and road connectivity.

Diversification strategy

Rice and its by-products are already there in the company for a long time. LEAF also entered wheat flour recently to complete the bouquet of essential food products. It also diversified into packaged food products which will adorn the shelves of large stores and retail shops. The product range will be expanded continuously to produce practically all the kitchen items. Be it pulses, tea/coffee, oils or the fruits and vegetables.

Punjab Greenfield Resources Ltd.(PGRL)

PGRL was promoted as wholly owned subsidiary of LEAF with capital contribution

A SNAPSHOT

- LEAF is in operation since 1981 and serving the nation with essential food products for the masses
- It houses the largest and the most modern paddy processing complex in the world spread over 100 acres, having best of the machinery sourced from Japan, Germany, Denmark, France and USA
- Produces rice for FCI as well as various premium varieties of long grain white rice including special rice for diabetics and heart patients.
- Produces rice bran edible oil, cattle feed and wheat flour
- Entering power generation from biomass by commissioning 30MW plant using husk as fuel, which is the world's largest biomass power plant
- The subsidiary company, Punjab Greenfield Resources Ltd. undertakes procurement, marketing, export/import, farm R&D and contract farming
- Capacities of each of the products being expanded further and new items are being added in its range of food products

of Rs.50 crore. It started operation from June'07 undertaking procurement and marketing of various agri products. The company would also undertake farm research and development to help the farmers and procure/import high yielding seeds as well as fertilizers. The company has also started contract farming which is likely to yield encouraging results in future.

Future Plans

LEAF plans to expand to 3 million MT paddy processing capacity in next two years by setting up a new plant at Moga along with down stream projects. It also plans to expand its biomass power capacity to 105MW in three years. It plans to enter into packaged products in a big way and expand operations of PGRL substantially.

The financials

The company achieved compounded annual growth rate (CAGR) of 41% in its turnover for the last five years (03-07 period). During the same five year span its CAGR of profitability was 164%. The capital expansion of the company was very limited and it stood at Rs.120 million as on 31st Sep. 07. For the year ended March 2007 the earning per share of the company was Rs.15.26 against Rs.9.43 in the previous year. The management expects to achieve similar kind of growth in the current and future years ■
