

A Dream Realised

A Vision Recognised

The Suprabha Group: A Trendsetter

On 15th May, 2007 the winners of the WORLDSTAR 2006 awards were honoured at Donald E. Stephens Convention Center, Rosemont, Chicago, Illinois, USA, where the directors Mrs. Sumalata & Mr. Prabhakar Bantwal received from the World Packaging Organisation, Sweden, the WORLDSTAR 2006 Award, the highest recognition for excellence in packaging in the world for their "Suprabha Transparent Seaworthy Packaging System". This is a great achievement for their Company – Suprabha Protective Products Pvt. Ltd., Pune.

Out of a total of 264 entries from 35 countries, the title of the best VCI packaging system for rust preventive packaging went to the 'Suprabha Transparent Seaworthy Packaging System'. This system makes inspection possible without having to open the packaging, especially at ports. This is important as components get damaged due to corrosion, as packages opened for inspection are not sealed properly. Non-toxic repellent type wood treatment liquid prevents fungal growth and insect attack. No de-preservation of packaged items is required, as imperceptible film forming VCI oil / gel are used. Biodegradable and eco-friendly desiccants condition the entrapped atmosphere and provide rust prevention by neutralizing saline atmosphere and contaminants.

The Suprabha Success Story Unfolds...

Receiving of this award at the International forum is a proud moment for an enterprise with a modest beginning. Suprabha's tryst with rust prevention goes back to the late 60's, when Mr. J. S. Betrabet, the visionary, octogenarian Chairman of the Suprabha Group, came up with the ground-breaking concept of bio degradable and eco-friendly Vapour Corrosion Inhibitors (VCI) technology in India. This heralded the beginning of a new era in the world of anti-corrosion solutions in India. Suprabha understands the needs of Indian Engineering Industry and also the working atmosphere, and has developed tailor-made products that are simple to use, besides being environmentally safe, and cost effective. Being import substitutes, many of the products not only saved Engineering Industry from heavy corrosion losses but also saved precious foreign exchange to the national exchequer.
