

LifeStage Pension: Complete Retirement Planning

ICICI Prudential has recently	36 – 45
launched a retirement solutions plan,	46 – 55
LifeStage Pension, which takes the	56 – 65
proposition of automatic asset allo-	66 – 80
cation into the retirement solutions	
space. The plan comes with a 100% allocation feature,	
which means that no allocation charges are deducted from	
the premiums paid during the term of the plan.	

LifeStage Pension offers a life-cycle based portfolio strategy that ensures that the nature of your investments changes with your age. In other words, your investments reflect your changing “ideal” asset allocation. At policy inception, your investment will be distributed between two funds—an equity fund (Pension Flexi Growth) and a debt fund (Pension Protector)—in proportions that depend on your age. As you move from age band to another, your

LifeStage Pension also comes with a Quarterly Rebalancing feature, which means that allocations will be examined every quarter and reset to prescribed asset allocation limits to adjust for market movements.

If you would rather structure your investments yourself, LifeStage Pension comes with six fund options with varying equity-debt combinations, with the customer having the freedom to choose his own fund allocation. Apart from the proposition of automatic asset allocation, LifeStage Pension comes with a very attractive charge structure, with 100% premium allocation in the plan. Premiums are tax deductible under Section 80CCC.

LifeStage Pension provides you with a unique strategy that continuously re-distributes your money across various asset classes based on your life stage and risk tolerance, thus providing you with a customised retirement solution. Retirement planning has never been so simple, yet so powerful.

Asset allocation at policy inception and during policy term

AGE BAND	EQUITY (%)	DEBT (%)
18 - 25	85	15
26 - 35	75	25
36 - 45	65	35
46 - 55	55	45
56 - 65	45	55
66 - 80	35	65
