

DR RAJESH GARG

progressive pain, stiffness and deformities in leg due to knee joint destruction. **Frequent use of painkillers** (ayurvedic, homeopathic, allopathic), joint injections, and arthroscopic joint wash or at times denial of the severity of the disease **offer temporary relief** and are not a solution to the problem. These palliative but not curative methods expose the patient to the risk of gastric ulcers; kidney damage; joint infections and other steroid related joint problems.

Dr. Garg affirms that after the failure of conservative trials (modified shoes, braces, analgesics, physiotherapy) one needs to consider undergoing joint replacement surgery before the vicious circle of more bone destruction - increasing deformity and pain begins. Newer techniques and implants make **Total Knee Replacement (TKR)** the only safe answer to that painful, crippling and deformed knee joint.

■ Rajiv Gandhi Cancer Institute & Research Centre

It is estimated that there are approximately 2 to 2.5 million cases of cancer in India at any given point of time and more than 7,00,000 new cancer patients diagnosed every year here. The cancer toll in India is due to the fact that over 70% of the cases are detected late and report for treatment in very advanced stages. Apart from the pain, misery and stigma inflicted on the patient and his/her family, the economic impact of this disease is

debilitating in most cases. The focus on Preventive Oncology comes to the scene here as researches all over the world has shown that simple changes in life's styles and regular screening can bring down the disease on its knees and can have benefits that are beyond cancer. Simple lifestyles changes such as eating nutritious meals on time, including physical activity in daily routine, cutting down the intake of alcohol and tobacco (in any form) used can make difference.

How can you tell if you have cancer without seeing a doctor?

You can only suspect. A regular thorough physical check-up is your best guard against cancer, plus an examination when one of the seven danger signals examination when one of the seven danger signals

or warning appears. You are the first line of defence against cancer because, you alone, can recognize a danger signal.

What are some of the early signs of cancer?

There are seven common ones. They are often called the Seven Danger Signals of Cancer. 1. Change in bowel or bladder habits. 2. A sore that does not heal. 3. Unusual bleeding or discharge. 4. Thickening or lump in breast or elsewhere. 5. Indigestion or difficulty in swallowing. 6. Obvious change in wart or mole. 7. Nagging cough or hoarseness.

You should at once consult a doctor upon the appearance of any sign.

What comprises a thorough cancer check-up?

Thorough cancer check-up means examination of all accessible body parts like head and neck, oral cavity, chest, abdomen, breast, vaginal and rectal examination. Cancer screening at RGCI&RC also includes certain blood tests, X-Ray Chest, US Whole abdomen, mammogram, pap's smear, sputum exam, stool for occult blood and PSA (for prostate). Clinical examination and all investigations are done at nominal rates.

A World of Care.....

- **Surgical Oncology** (With exclusive Head & Neck, Breast & Thoracic, G.I. and G.U. Services)
- **Radiation Oncology and Medical Radiation Physics**
 - ❖ Intensity Modulated Radiation Therapy (IMRT)
 - ❖ 3D Conformal Radiation Therapy (3D-CRT)
 - ❖ 3 Liner Accelerators (LINAC)
 - ❖ Brachytherapy
 - ❖ Simulator
- **Medical Oncology**
 - Bone Marrow Transplantation
 - Pediatric Hematology & Oncology
 - Nuclear Medicine With Gamma Camera
- **Radiology**
 - **Preventive Oncology**
 - ❖ X-ray CR System
 - ❖ Barium Studies and other special radiological procedures
 - ❖ Multislice spiral CT Scan with CT Angiography and Virtual Endoscopy

- ❖ CT Guided biopsy/ FNAC/ Drainage
- ❖ MRI
- ❖ Ultrasound and US guided Biopsy/FNAC
- ❖ Color Doppler
- ❖ Echocardiography / Doppler and Stress Echo
- ❖ Transrectal Ultrasound (TRUS) and biopsy
- ❖ Mammography
- ❖ Stereotactic Biopsy / FNAC of breast / wire localization of non palpable lesions in the breast
- RF ablation of Tumors
- PET CT. (40 Slice CT with High Resolution PET)
- **Laboratories**
 - ❖ Histopathology / Cytology / FNAC/ Frozen Section
 - ❖ Immunohistochemistry
 - ❖ Biochemistry
 - ❖ Hematology
 - ❖ Microbiology
