

Quality you can rely on

Developing a billion people.

Since 1921, Komatsu Ltd. has been providing innovative, safe and eco-friendly products and services to a plethora of industries, while meeting the diverse expectations of customers worldwide. Its chief contributions have been in the areas of Infrastructure, Mining, Hydro Power Dams and a host of Development Projects across various countries around the globe.

In India, Komatsu is contributing by supplying efficient equipment for infrastructure, mining, and several other development projects. Today, its equipment is engaged in an irrigation project in Andhra Pradesh, which ensures

optimal utilization of excess rainwater. This in turn will boost agricultural products, enabling a healthier nation and prosperous citizens.

Komatsu's powerful machines are designed with Japanese technology, but manufactured in India. So while they can perform highly sophisticated operations, they're also built tough to endure India's harsh weather conditions.

Armed with ingenious equipment, a dedicated workforce, and the relentless drive to create a better world, Komatsu is working extensively for the progress of both, the nation, and its people.
