

Of Terror

Since terror seeped into the Indian hinterland post-2001, terrorists have moved on from crude IEDs to sophisticated devices shaped like military anti-personnel mines, designed to inflict maximum casualties

HYDERABAD, Aug, 25, 2007

WHAT HAPPENED: Suspected HUIJ militants struck with twin bomb blasts at Lumbini park and a popular snack stall

DEATH TOLL: 42

DEVICE USED: IEDs with timers

STATUS: No arrests

JAIPUR, May 13, 2008

WHAT HAPPENED: Nine blasts in a market place

DEATH TOLL: 63

DEVICE USED: IEDs on bicycles

STATUS: No arrests

BANGALORE, July 25, 2008

WHAT HAPPENED: Six low-intensity blasts rock India's IT capital

DEATH TOLL: 1

DEVICE USED: IEDs

STATUS: Under investigation

AHMEDABAD July 26, 2008

WHAT HAPPENED: 22 blasts in 17 places

DEATH TOLL: 53

DEVICE USED: Improvised directional anti-personnel mines, car bombs

STATUS: Under investigation

Shaped to blast pellets and shrapnel in a 60 degree arc for maximum damage with minimal explosive.

Each pellet has the velocity of a .22 calibre bullet.

THE DESI CLAYMORE MINE

Improvised Directional Anti-Personnel Mines were used in Ahmedabad. Copies of Claymore mines were used by several armies including the US and Pakistan.

Explosive cocktail of gelatin sticks, Ammonium nitrate, crude oil and urea.

Clock timer

Hundreds of steel pellets tightly packed together on a bed of explosive.

CAR FILLED WITH LPG CYLINDERS

Inspired by the 'Gas Limos project' conceived by Al Qaeda hand Dhiren Barot. It was successfully used for the first time in Ahmedabad when an ambulance packed with LPG cylinders blasted the civil hospital. Two WagonRs in Surat failed to explode.

THE M18 CLAYMORE MINE

Designed to ambush infantry. It is a block of convex-shaped plastic explosive packed with 700 steel ball bearings triggered off either by a timer or a trip wire.
