HAIR AND HOW

Urmila Matondkar is shedding her oomph tag to turn a new shade of grey. The 33-year-old will reprise Simi Garewal's character in Himesh Reshammiya's *Karzzzz*, but sans any grey in her hair. "It will be a musical extravaganza and a modern-day version of the film. So I won't be dyeing my hair," says Matondkar, adding that it is too early to talk about the film since she hasn't started shooting yet. Who said grey sells?

Mehbooba 3.0

Everyone wants to be Mehbooba. After Urmila Matondkar and Mallika Sherawat tried to match Helen's moves, it is the turn of item girl **Sambhavna Seth** to shimmy in a song by the same name in the Bhojpuri remake of *Sholay* called *Gabbar Singh*. Seth, who has earned the tag of Bhojpuri Helen, says, "My song is much better than Urmila and Mallika's versions." Dance baby dance.

RETURN OF A GOPI

Following the announcement of Karnataka's former chief minister **S.M. Krishna's** return, there have been sparks of a different kind. A former associate's book *Halli Hakkiya Haadu* (the song of the village bird) has many pages devoted to Krishna's liaison with yesteryear's heroine Saroja Devi. The scene has heated up as Saroja admitted to their youthful tryst and Krishna's supporters demanded a ban on the book. Many think it's much ado ancient history, unless they are still carrying a torch for each other—something both parties refuse to discuss. And the Krishna *leela* continues.

KPN

Curve Less

We've read enough about **Kareena Kapoor's** weight loss routine. And now we have seen enough too. At the recently-concluded Stardust Awards, the Bollywood bombshell appeared in her new reed-thin avatar and nearly scared the front-benchers. Kapoor, 27, may be preaching the benefits of yoga to all those who want to become "mentally and physically fit" and even giving tips to boyfriend Saif Ali Khan, but with her curves all gone, she is a shadow of her former glamorous self. Spreading your self too thin, Bebo?

Enjoy your way to a healthy heart.
