

The Center for TeleInfrastruktur (CTIF) THROUGH INNOVATION TOWARDS GLOBAL DYNAMIC MEGACOMMUNICATIONS

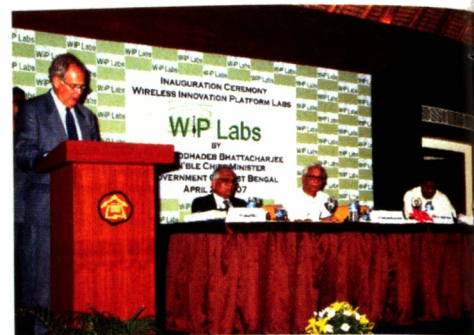

The Center for TeleInfrastruktur (CTIF) at Aalborg University, Denmark is a new paradigm shift in innovative research and higher education in the area of next generation mobile communications. With its pioneer concept of worldwide distribution of research and educational activities combined with commercialization of the research results it provides entrepreneurship at the level of Masters education and innovation at the PhD level.

The most recent achievement of CTIF is the opening of its branch CTIF-India in Kolkata, India on the premises of University of Calcutta on December 7, 2007 (photo below left: from left to right, Professor Ramjee Prasad, Director of CTIF, Professor Finn Kjaersdam, President of Aalborg University, Denmark, Prof. Asis Banerjee, Vice Chancellor of the University of Calcutta, Honorable IT Minister Professor Debesh Das, West Bengal, India, Professor Susanta Sen, Dean of the Faculty of Technology of the University of Calcutta, Professor Pradip K. Saha, Director, CTIF-India.).

With CTIF's new form of education, the education system in India which is mainly targeted towards achieving a job will move to the domain of Research and Development (R&D). Innovative research projects will lead to Intellectual Property Rights (IPRs).

CTIF is a worldwide research center with headquarters at Aalborg University, Denmark, under the leadership of Professor Ramjee Prasad and conducting research at the highest international level to enhance the technological development within modern wireless communication technologies and teleinfrastructures, one of Europe's most dynamic technology sectors.

CTIF has strong relations to industry for carrying out research and for developing new types of networks, devices and services. Activities are strongly oriented towards commercialisation of the achieved research and development results.

CTIF follows the motto that a flourishing high-tech economy depends critically on the ability to provide two key elements: an outstanding research environment embedded in an excellent education system, and a deeply engrained culture of entrepreneurship. A joint India-Denmark cooperation in the field of information and communication technologies (ICT) will advance India's research, development, and technical reputation by the joint work with Indian and Danish innovators to lead the next revolution in ICT. This will have an impact for the development of world-leading technology solutions with the primary objective of commercialization and venture formation.

Use and enhancement of commercialization and innovation programs developed by both India and Denmark over the last decade will find new fruitful soil for creation of further innovations. This in its turn will create new high-paid jobs leading to tax revenues for India, and at the same time boost the Indian higher education system.

An important activity in this direction, strengthening Indian-Danish cooperation was the inauguration of the Wireless Innovation Laboratories (WIP Labs, www.wiplabs.com) that took place on April 20, 2007 in Kolkata, West Bengal (top right: From left to right: His Excellency Ole Poulsen Lonsmann, Danish Ambassador to India, Prof. Dr. Ramjee Prasad, Aalborg University, the Hon'able Chief Minister of West Bengal, Shri Buddhadeb Bhattacharjee, and the Hon'able IT Minister of West Bengal, Prof. Debesh Das).

Through its worldwide distribution, including the branch in Kolkata, CTIF ensures transfer of adapted and optimized systematic process for "creating value out of scientific innovations" to India and worldwide. The hosting organisations can exploit their substantial intellectual property base more effectively abroad by means of the CTIF branches and possibly startup companies that will emerge from them. For example, it is expected that 2 or more startups can occur from CTIF-India, Denmark and worldwide (depending on the involved partners) are expected.

Denmark-India activities, and in particular, activities of CTIF-India, will allow the Ministry of Communications and Information Technology, Government of India to complement their national education system with the European Universities practice and internationally-taught M.Sc. and Ph.D. courses on telecommunications, value creation, entrepreneurship and benefit from learning of the European and international way of innovating. Professors, staff members and students will be exchanged regularly with the European Universities and other leading high-tech organisations in Europe and worldwide. Young entrepreneurs from CTIF-India will have access to Europe's network of top tier venture capitalists, world-class researchers, government agencies and high-tech businesses.

For more information you can visit the CTIF's Web site (<http://www.ctif.aau.dk>) or contact the director of CTIF, Prof. Dr. Ramjee Prasad at prasad@es.aau.dk.
