

DR. J. CRAIG VENTER-Pioneering Genomic Researcher

Dr. J. Craig Venter is regarded as one of the leading scientists of the 21st Century for his invaluable contributions to genomic research. He is founder and president of the J. Craig Venter Institute, a non-profit, basic research organization dedicated to the advancement and understanding of the science of genomics and communication of those results to the scientific community, the public and policy makers. Dr. Venter and his team continue to blaze new trails in genomics research and have recently published several important papers outlining scientific advances with significant implications for the human race such as the first complete diploid human genome, multiple advances in the field of synthetic genomics and important new understanding in infectious disease.
